

Assignment: Online Order Tracking System

Build an Angular app where:

Users can view orders

Navigate using routing

Format data using built-in pipes

Create a custom pipe for delivery status

Instructions:

You are building an **Order Tracking App**:

- Home → Welcome page
- Orders → List of all orders
- Show formatted price, date
- Custom pipe → Convert status code into readable text
- Use Custom Pipe orderStatus
- Update orders.component.html

Status: {{ order.status | orderStatus }}
